

Wallet Service — API

- **Base URL (direct):** `http://localhost:8084`
- **Via gateway:** `http://localhost:8080/wallets/**`
- **Role:** owns Paytm/PhonePe wallets. Calls Customer (validate), Transaction (record), Notification (limit-exceeded).

Endpoints exposed

POST /wallets — create a wallet

Request:

```
{ "customerId": "6699a1f2c3d4e5f601234567", "provider": "PAYTM",  
  "maxLimit": 10000.00 }
```

Response 201: wallet document. Error: 404 unknown customer.

→ **Calls** GET /customers/{customerId} first.

GET /wallets?customerId={id} — list a customer's wallets

Response 200: array of wallets.

POST /wallets/{id}/add — add money (Add Money)

Ported from WalletOps → Add Money.

Request: { "amount": 500.00 } → Response 200: updated wallet.

→ **Calls** POST /transactions (direction=WALLET_ADD).

On Paytm cap exceeded → **Calls** POST /notifications and returns 400.

POST /wallets/{id}/pay — pay a bill (Pay Bill)

Ported from WalletOps → Pay Bill.

Request: { "amount": 200.00 } → Response 200: updated wallet.

→ **Calls** POST /transactions (direction=WALLET_PAY). Error: 400 insufficient balance.

POST /wallets/{id}/transfer — transfer to another wallet (Transfer to Wallet)

Ported from WalletOps → Transfer to Wallet.

Request: { "targetWalletId": "6699a7...73", "amount": 300.00 } → Response 200: both wallets.

→ **Calls** POST /transactions twice. Error: 400 insufficient balance.

Endpoints called (outbound)

Target service	URL	When
Customer	GET /customers/{id}	Validate owner on wallet creation.
Transaction	POST /transactions	Record every add / pay / transfer leg.
Notification	POST /notifications	Paytm balance exceeds <code>maxLimit</code> (replaces <code>FileLogger</code>).

Error mapping

Exception / condition	HTTP status
<code>InsufficientBalanceException</code>	400 Bad Request
Paytm limit exceeded	400 Bad Request (+ notification logged)
<code>InvalidAmountException</code>	422 Unprocessable Entity
unknown customer / wallet	404 Not Found
