

Wallet Service — MongoDB Schema

- **Database:** `walletdb`
- **Collection:** `wallets`
- **Port:** 8084
- **Ported from:** `wallet/WalletOperations`, `wallet/PaytmWallet`, `wallet/PhonePeWallet`

Document fields

Field	BSON type	Constraints	Notes
<code>_id</code>	ObjectId	primary key, auto-generated	
<code>customerId</code>	string	required, ref → <code>customerdb.customers._id</code>	Owner. Validated via Customer Service.
<code>provider</code>	string (enum)	<code>PAYTM</code> <code>PHONEPE</code>	Was the two wallet subclasses.
<code>balance</code>	decimal (<code>Decimal128</code>)	required, ≥ 0	Current wallet balance.
<code>maxLimit</code>	decimal (<code>Decimal128</code>)	required for <code>PAYTM</code>	Paytm cap that triggers a notification when exceeded.
<code>createdAt</code>	date	set on insert	

Indexes

Index	Fields	Type	Reason
<code>_id_</code>	<code>_id</code>	default	Primary key.
<code>ix_customer_provider</code>	<code>customerId</code> asc, <code>provider</code> asc	compound	One lookup for a customer's wallet of a given provider.

Business rules

Provider	Rule	Effect
<code>PAYTM</code>	balance may not exceed <code>maxLimit</code> on add	Reject + POST a log to Notification Service (" <code>Wallet has exceeded the maximum amount</code> ").
both	pay/transfer may not overdraw balance	<code>InsufficientBalanceException</code> (400).
both	amount must be > 0	<code>InvalidAmountException</code> (422).

Example document

```
{
  "_id": { "$oid": "6699a6ddeeff000101234572" },
  "customerId": "6699a1f2c3d4e5f601234567",
  "provider": "PAYTM",
  "balance": { "$numberDecimal": "800.00" },
  "maxLimit": { "$numberDecimal": "10000.00" },
  "createdAt": { "$date": "2026-07-16T10:30:00Z" }
}
```

Notes

- The legacy **PaymentType** marker interface (which let wallets and accounts share a map on **Customer**) is gone — wallets are a fully separate service.
- Wallet movements are recorded in Transaction Service with **type=PAYTM|PHONEPE**.
